

Isaac Daniel Sudakar

Software Developer with 5+ years of experience shipping B2B SaaS products, AI-powered tools, and internal platforms. Hands-on from discovery through code; builds in React, Next.js, Python, and Rust and integrates LLMs end-to-end. Proven track record translating ambiguous problems into shipped product with measurable adoption and efficiency gains.

Work Experience

Full Stack Developer, The Blessed Life

2025 – 2026

- Built and shipped an AI-powered Chrome Extension for internal barcode workflows, live in stores, improving team efficiency 50% and cutting file retrieval time 35%.
- Built and maintained full-stack applications, improving feature adoption by 30% and workflow completion by 25%.
- Developed APIs, frontend components, and database integrations; contributed to architecture, testing, and deployment.

IT Operations Specialist, Calgary Co-op

2024 – Present

- Built and shipped an AI-powered Chrome Extension for internal barcode workflows, live in stores, improving team efficiency 50% and cutting file retrieval time 35%.
- Live in stores daily; shipped without a dedicated engineering team and improved store workflow efficiency by 20%.

Electrical Engineer, Cris Planners and Builders

2021 – 2023

- Cross-functional delivery in compliance-driven environments; built systems-thinking foundation directly applicable to software SDLC.

Projects

Pocket Resume

- Conceived, built, and shipped a full-stack AI tool that rewrites resumes to match job descriptions; solo, end-to-end.
- Demonstrates rapid LLM prototyping with a prompt-engineered backend and React/Next.js frontend, zero to live product.

Barcode Lists (Calgary Co-op Internal Tool)

- Identified an operational gap, scoped the solution, and built a production Chrome Extension with AI barcode OCR.
- Live in stores daily; shipped without a dedicated engineering team and improved store workflow efficiency by 20%.

SatBrain

- Led product strategy and roadmap for an AI-powered study platform from discovery through delivery.
- Synthesized user data into prioritized features, driving +30% adoption growth across the platform.

Lite-Mux

- Built a lightweight terminal multiplexer in Rust, demonstrating low-level systems programming and memory-safe concurrency.
- Architected efficient I/O multiplexing and process management using Rust ownership model for zero-cost abstractions.

Skills

Languages

- JavaScript
- TypeScript
- Python
- Rust
- SQL
- HTML
- CSS

Frameworks / Tools

- React
- Next.js
- Node.js
- Chrome Extension APIs
- REST APIs
- GitHub
- Vercel

AI & ML

- LLM Integration
- Prompt Engineering
- AI Prototyping
- OCR

Product Management

- Roadmapping
- OKRs
- Agile / Sprint Planning
- GTM Strategy
- User Research
- Stakeholder Mgmt

Educational Background

Southern Alberta Institute of Technology (SAIT)

2025

Product Management Program

Southern Alberta Institute of Technology (SAIT)

2024

Project Management Program

Animalar Engineering College

2018

B.E. Electrical and Electronics Engineering
